

Give Your Users the Data They Trust

For A/E/C professionals, building owners and facility managers, accurately estimating the cost of construction is critical for capital planning and preventing cost overruns. Thousands of these professionals in the healthcare, higher education, commercial, retail, hospitality, and federal, state and local government sectors trust RSMeans data when planning, estimating, budgeting or bidding a project for new construction, renovation, repair and/or maintenance, and rely on its accuracy, localization and update frequency. Many government agencies even specify RSMeans data in their requests for proposals because of its auditability.

- Accurate
- Localized
- Up-To-Date

Each year we invest over 22,000 hours in cost research

Data for more than 53,000 distinct materials and 80,000 unit costs is gathered from 757 local markets across the U.S.

Labor costs are updated annually and based on the average number of wage rates for 30 major U.S. cities

We are aware of the variables affecting cost, and takes into account quality, overtime, productivity, size of project, location and other factors

Complete Datasets Delivered Via API

RSMeans data offers more than 20 standard datasets with costs at the unit line, assembly and square foot level. These datasets are now more convenient than ever to integrate into the top software platforms for the construction industry via API. As a reseller of RSMeans data, you can create customized and localized packages in order to offer the most robust set of estimating data.

Top Selling Datasets:

- Complete Online Library
- Building Construction Costs
- Electrical Costs
- Square Foot Costs
- Facilities Construction Costs
